SUMMARY

Final-year B.Tech Computer Science (Data Science) student with hands-on experience building full-stack AI applications spanning LLM integration, quantum cryptography, and multimodal intelligence systems. Demonstrated ability to design and deploy production-ready solutions , with a focus on real-world problem solving through hackathons and innovation-driven projects. .

TECHNICAL SKILLS

Programming Languages: Python, SQL, HTML/CSS
Databases: MySQL,PostgreSQL
Tools: Git, Vercel, Render
core skills: Problem-solving , Team collaboration , Leadership

PROJECTS

Cymonic — AI-Powered Smart Talent Selection Engine
Web Application — React, FastAPI, NVIDIA NIM, Llama 3

- Built a full-stack AI recruitment platform replacing keyword-based ATS with LLM semantic scoring via NVIDIA NIM (Llama 3 8B & 70B), featuring multi-format resume ingestion (PDF, DOCX, Images) through OCR parsing and real-time SSE progress streaming to a React/Vite frontend.
- Implemented a recruiter-adjustable weighted semantic scoring engine, anti-fraud keyword-stuffing detector, and AI-driven interview question generator; deployed full-stack on Vercel and Render.

KickStats — FIFA World Cup Match Win Predictor
Personal Project — `Python, XGBoost, scikit-learn, K-Means, Streamlit, Pandas, Plotly`

- Built an ML-powered football match prediction system trained on 100+ years of international match data using XGBoost, achieving 55% prediction accuracy against a 33% random baseline.
- Developed a tactical lineup simulator with actual 2026 World Cup squad data integrating EA FC 25 ratings and K-Means clustering for player archetype classification, with visual analytics deployed on Streamlit Cloud.

BB84 QKD Simulator
Mini-Project — TypeScript, Python, Qiskit, React, Flask, Cryptography

- Developed an end-to-end BB84 Quantum Key Distribution simulator with novel Recursive BB84 protocol (rolling basis bias, RAM wipe for forward secrecy), Cascade error reconciliation, and QBER-based intrusion detection identifying eavesdrop, MITM, and DoS attacks.
- Integrated Qiskit quantum computing backend with Flask REST API and React/TypeScript frontend, enabling real P2P secure messaging over LAN with dynamically generated quantum keys and smart abort classification.

EDUCATION

Mar Athanasius College of Engineering, Kothamangalam
Bachelor of Technology in Computer Science and Engineering (Data Science)

VOLUNTEERING EXPERIENCE

Web development Internship - Keltron Knowledge Centre , Trivandrum *June 2026-July 2026*
Software Developer Internship - Humbaba Media Solutions , Trivandrum *June 2026- Present*
Program and Technical Team – IEEE MACE and Google Develepor Group On Campus *Feb 2025- Present*
Organising Team-AISA MACE (Space Club) *June 2025-July 2026*
.hack() – Logistics Team, IEEE MACE
Lumora(Designathon) – Logistics and Hospitality Lead

CERTIFICATIONS

- NPTEL – Introduction To IOT *Jul – Oct 2024*
- MashupStack – Python *Jun 2025*
- AccelerteX – Prompt Engineering *Nov 2024*
